ASSOCIATION OF REALTORS®
The Voice of Real Estate® in the Denver Metro Area

Denver Metro Real Estate Market Trends Report

December 2019

MARKET OVERVIEW

The December report, according to recent data provided by the Denver Metro Association of REALTORS® Market Trends Committee, showcases the November market transactions encompassing the 11 counties of the Denver Metro Area (Adams, Arapahoe, Boulder, Broomfield, Clear Creek, Denver, Douglas, Elbert, Gilpin, Jefferson and Park).

Here are the highlights:

		Prior Month	Year-Over-Year
 Residential (Single Family plus Condo)			
Active Inventory	6,988	-18.34%	-7.20%
Sold Homes	3,935	-22.78%	-5.93%
Sold Price - Average	\$490,874	1.43%	6.76%
Sold Price - Median	\$422,000	0.06%	6.84%
Days on Market - Average	35	2.94%	9.38%
 Single Family (aka Detached Single Family)			
Active Inventory	4,709	-19.42%	-12.36%
Sold Homes	2,864	-22.03%	-2.92%
Sold Price - Average	\$537,624	1.42%	6.85%
Sold Price - Median	\$453,250	-0.38%	5.52%
Days on Market - Average	36	9.09%	9.09%
 Condo (aka Attached Single Family)			
Active Inventory	2,279	-16.00%	5.66%
Sold Homes	1,071	-24.74%	-13.14%
Sold Price - Average	\$365,856	0.29%	2.75%
Sold Price - Median	\$312,000	0.97%	4.35%
Days on Market - Average	34	5.26%	17.65%

MARKET INSIGHTS

- ✓ More new home construction may finally be coming. Housing permits, a gauge for future construction, climbed five percent nationally in October, reaching the fastest rate of building permit authorizations since 2007. Broken out, single-family permits increased 3.2 percent to a rate of 909,000, while multi-family permits rose 8.2 percent to a rate of 552,000. Permits rose in every region of the country last month and are 14.1 percent higher than a year ago.
- ✓ Mortgage purchase applications were up 55 percent year over year in November nationally. This number sounds exciting as potential buyers get active but the comparison is skewed since Thanksgiving fell a week earlier last year. Be ready for negative headlines kicking off December with news of purchase applications falling off.
- ✓ Initial jobless claims were headed up for several weeks during the month. This might have been the canary in the coal mine, tipping the scales towards increased unemployment and the recession. Jobless claims fell 15,000 nationally at the end of November bringing good news and breaking the pattern.
- ✓ The second look at the third quarter GDP showed an increase from 1.9 to 2.1 percent. Remember that the second quarter was two percent so this is slightly stronger. This was due to a slightly stronger consumer spending (up 2.9 percent) as well as durable goods' move to the upside.
- ✓ Freddie Mac released its 2020 and 2021 forecasts. They are calling for mortgage interest rates to remain around 3.8 percent in 2020 and 2021 and total U.S. home sales, including new and existing homes, to continue to tick up from sales nationally in 2019 to 6.1 million in 2020 and 6.2 million in 2021. Low interest rates and slower appreciation is supporting improved affordability.
- ✓ Many real estate pros note a growing subgroup of buyers is showing a desire for more walls to help define living spaces. Older consumers may be growing most tired of the popular open floor plan. Thirty-seven percent of Baby Boomers say they prefer the open concept, while 40 percent of Generation X buyers and 43 percent of Millennials say they also prefer it. Among seniors older than Boomers, just 29 percent said they prefer open floor plans, according to a survey from the National Association of Home Builders.
- ✓ Many individuals who are doing fix and flips are struggling to find properties as inventory stays steady and in some areas is decreasing.
- ✓ Generation Z, which comprises the youngest potential consumers in the housing market, is bullish on homeownership. According to a study published in REALTOR® Magazine, Freddie Mac researchers surveyed consumers ages 14 to 23 and found they tend to have more positive perceptions of what it means to be a homeowner than Millennials did at that same age. Eighty-six percent of Gen Z-ers say they want to own a home someday.
- ✓ The total population of Colorado, according to the 2010 U.S. Census, was 5,029,196 with 3,803,587 people over eighteen years old. As of July 1, 2018, Colorado's total population has risen to 5,695,564 with 4,430,329 people over eighteen.
- ✓ If your clients are interested in new construction, head to Stapleton as zip code 80238 is where you'll find the most. In 2018 and 2019, the largest number of new single-family construction permits, 389, compared to other Denver-area communities were issued.
- ✓ Denver is one of the most expensive cities for commuting. When you look at fuel, maintenance and time, a new study with data from the Census American Community Survey says Denver-area residents are spending an average of 31 minutes to get to work and spend about \$9,055.87 each year commuting. Research suggests that people who commute longer than an hour report being more depressed, more stressed and experience a lower quality of life. Littleton is ranked as the best suburb for commuting.
- ✓ The Mile High City may have a lot of great attributes, but finding love is not one of them. Global touring series *The Great Love Debate* has named Denver America's worst city to find love for the second time since 2017.
- ✓ Apparently lawyers love it here. Denver's population of lawyers is the third fastest-growing in the nation, according to a new report from CBRE. As of 2019, there are about 9,650 lawyers in Denver who make an average salary of \$156,000. According to an article in the Denver Business Journal, law firms like LoDo best.
- ✓ **Quick Stats:**
 - Average active listings for November is 14,708 (1985-2018).
 - Record high November was 2006 with 27,530 listings and the record-low was 2017 with 5,131 listings. November 2019 had 6,988 active listings.
 - Historically, the average decrease in active listings from October to November is 8.14 percent. 2019 represents a much larger decrease of 18.34 percent.

EXPERT OPINION

JILL SCHAFER

Chair of the DMAR Market Trends Committee and Denver real estate agent

Maybe it was because I ate so much on Thanksgiving, but I kept thinking of food metaphors when reviewing the November Denver-metro real estate statistics.

The number of new listings was as scarce as the sweet potato casserole after the first pass around the table. The significant 32.70 percent month-over-month reduction in new choices helped shrink the number of active listings from 8,557 at the end of October to 6,988 at the end of November, an 18.34 percent drop. If you remember, in the last quarter of 2018 we had a surge in new inventory, but year-to-date new listings were down 7.2 percent.

The market would have gobbled up even more of our excess inventory if we hadn't also had fewer sales. Closed sales were down 22.78 percent month over month, but sales were still up year to date. The number of homes that went under contract dropped 10.84 percent month over month, which indicates the number of sold homes will likely be down next month, too.

Fewer homes on the market means it's tougher for buyers in an already expensive city to own real estate, especially in the very popular housing segment of homes priced under \$400,000. Many buyers continue to have to put in multiple offers before landing a home.

So what's up, besides the number on my scale? The average days on market and the average sold price both increased. The average days on market was 35, up just one day from the prior month. Year to date the average was 31 days, which was 24 percent longer compared to last year. This is what both buyers and sellers need to know. While homes may be on the market longer, and the close-to-list-price ratio was down to 98.80 percent month over month in November and down year to date to 99.23 percent, this is still not a market for low-ball offers.

Sellers may not always be getting full asking price, but they did get a slightly bigger piece of the pie. The average home price bumped up 1.43 percent from October to November and was 2.79 percent higher year to date compared to 2018. That is the meat of our real estate investment: continued increase in prices and a comfortable, sustainable rate of appreciation still makes real estate a solid investment.

What will be under the real estate tree next month? The answer to that may be swayed by our weather in December. More storms and very cold temperatures will slow things down as usually happens at this time of year. But it's a certainty that while buyers will be out doing holiday shopping they will also be out house shopping. This is a good time of year to sell because buyers remain hungry for inventory and the dream of homeownership is on many people's wish list this December. If you're not up for putting your home on the market over the holidays, use your extra time off to get your home ready to hit the market at the beginning of 2020.

EXPERT OPINIONS

“Luxury Market (properties sold for \$1 million or more): Like my Thanksgiving meal, the Luxury Market had some high highs and some lower lows. The highest selling single-family detached property sold for \$7,250,000 and was five bedrooms. The highest selling condo was three bedrooms and sold for a respectable \$5,359,975, which averages to over \$1.5 million per bedroom! The relative low of this story was the number of sold condos, 15, which represented less than 10 percent of the total

luxury sales last month. The amount of sold properties in November was 166, which was 15.31 percent lower than last month, but 26.72 percent higher than the previous year. This shows there is consistency in total inventory fluctuations across all price points throughout the year. The same can be said about days on market. The median days on market was 33, which was higher than last month (28) and less than last year (45).

While inventory has decreased from the previous month, the close-price-to-list-price ratio has remained steady from both the previous month and year. Out of the 166 luxury properties that sold, a little more than 90 percent of them were single-family homes, which could explain why the months of inventory for single-family properties is at the high end of a balanced market with 5.45 months of inventory. Likewise, months of inventory for condos shows a buyer's market at seven months. The average months of inventory across all price points is 2.13, showing that the Luxury Market is on its own island. The condo market has higher months of inventory compared to single-family properties throughout all price points. This shows that, overall, there is more demand than supply in single-family properties relative to condos.

Year to date, there has been over \$3.45 billion in sales, which is significantly higher than any of the previous five years. Likewise, the amount of sold properties is higher as well. Considering the boom that we have seen in Colorado throughout the last 10 years, the amount of luxury properties sold is not surprising nor is the increase in sales volume. I did find it surprising, however, that despite there not being a lot of condo sales last month, year to date, luxury condo sales were up 50 percent from the previous year. This could be due to more condo development. While turkey and desserts are fun, million-dollar bedrooms are more fun! I'm excited to see what December has to bring us...

— **Andrew Abrams, DMAR Market Trends Committee member and Denver real estate agent**

Signature Market (properties sold between \$750,000 and \$999,999): Who watched *Willy Wonka and the Chocolate Factory* this Thanksgiving? Oh, come on... it's as traditional as *A Christmas Story* in December. Everyone wants the golden ticket! Real estate, especially in the Denver market, continues to provide that promise of gold. Continued strength in Colorado's job growth, increased affordability at all levels with sustained low interest rates and a healthy third quarter GDP are economic factors that support all of us getting a

golden ticket when we invest in the strength and stability of real estate. The Signature Market is no exception... it's all in the long game.

Inventory woes continue to affect us all. The National Association of REALTORS®' Chief Economist Lawrence Yun noted that residential sales continue to be strained by the lack of new inventory. Signature Market active inventory was down for both detached and attached homes month over month by 17 and 11.5 percent, respectively. Year over year, there is an even wider gap: detached homes were up 5.3 percent while attached homes were down 21.7 percent. The difference lies in the number of homes sold. Buyers in the Signature Market were gobbling up attached homes, with the number of sold properties up 12.12 percent from last month and 8.82 percent since last year. This decreased the months of inventory for attached homes from 4.7 to 3.5 months, while keeping detached homes mostly flat at 2.7 months.

Remember, this is a long game. So, the part of this story I love the most is where we are landing in 2019 as we are 11 months into the year. Year to date, the number of sold homes for the Signature Market was up a strong 6.9 percent and sales volume was up 6.72 percent compared to last year. While the year-to-date median and average sold prices were hovering right below a zero percent change for detached and attached homes compared to last year in this segment, the price per square foot (PSF) tells us we are gaining value on our homes. Year to date, PSF for detached homes moved up 1.33 percent and attached homes were up 4.99 percent. Not a bad place to be on this fine cold day! What will the first of next year bring? Well, in the immortal words of Mr. Wonka, "The suspense is terrible. I hope it will last." — **Nicole Rueth, DMAR Market Trends Committee member and Denver mortgage expert**

EXPERT OPINIONS

Premier Market (properties sold between \$500,000 and \$749,999): Did you feel it? That stinging chill that swept across metro Denver in November was not relegated only to our weather and the Broncos season, it also found a way into parts of the Premier Market. But while we may never grow accustomed to our football team performing this way, when we dig into the real estate numbers we see these chilling changes are not as cold as we thought, and not entirely uncommon.

In November, the Premier Market saw 287 fewer residential properties sell than in October, a 24.18 percent decrease. Yet, this is still an increase of 91 properties (11.25 percent increase) over November 2018. Additionally, this price range has seen year-to-date increases of sold properties for at least four consecutive years.

Average sales price has seen seasonal cooling, too. The average single-family sales price of \$588,800 in November represented a 1.01 percent decrease compared to October 2019 and a 0.81 percent decrease from November 2018. Condo pricing followed suite, with the average condo sales price decreasing 2.73 percent from October to \$574,405 in November, which represented a 4.64 percent decrease from last year.

The average and median days on market held steady both month over month and year over year. Metro Denver is experiencing numbers in the 20-day range for median days on market and 40-day range for average days on market.

Premier Market residential properties continued selling at a very high percentage of their listed price. In November, the close-price-to-list-price ratio clocked in at 98.86 for single-family homes and condos combined. Detached single-family homes were almost identical, ending the month at 98.84 percent while condos finished a little higher at 98.99 percent. Year to date, single-family homes and condos combined were still over 99 percent, finishing November at 99.16 percent. These ratios are outstanding, especially when considering the time of year and how the metro-Denver market has evolved. Months of inventory remain low in the Premier Market, as November closed with 1.99 months of single-family inventory available and 3.69 months of condo inventory to offer. These numbers continue to indicate it's a seller's market.

All in all, what do these statistics suggest for the Premier Market? Yes, we're getting frostier this time of year, but that is completely normal and to be expected. Metro Denver is *not* a real estate market that totally freezes over in the winter

months. We slow, but continue moving forward. When the sun is out, more often than not, we're out as well and it's the same pattern in the Premier Market.

— **William Maline, DMAR Market Trends Committee member and Denver real estate agent**

Classic Market (properties sold between \$300,000 and \$499,999): The Classic Market continues to be the largest single price niche in the 11-county metro area. In the entire residential market, a total of 3,935 homes sold in November; of those homes, 53 percent were in the \$300,000 to \$499,999 price range. That's up from 50.13 percent in June of this year. Driven by price appeal, the segment's popularity continues to grow.

November's single-family sales within this price range made up 79 percent of the transactions of single-family homes and condos combined. Investors prefer single-family homes, often choosing to renovate and sell or lease. Details of the typical home include a median of three bedrooms, three baths, main level of 1,558 square feet, selling in 23 days at \$400,000 for 98.52 percent of the original list price and built in 1982.

November's condo sales in the \$300,000 to \$499,999 price range typically included a median of two bedrooms, three baths, 1,387 square feet, selling in 23 days at \$370,000 for 98.36 percent of original list price and built in 2001. With more condos built over the years in the city of Denver itself, there is often a greater inventory of condos, ideal for the core urban lifestyle. Of the 447 condo sales in November, 134 were in the city of Denver (30 percent). That's significant given that Denver is one of 11 counties in the report. Just as interesting, of the 974 condos on the market in the Classic Market, 30 percent are in Denver, and of the 830 under contract, 23 percent are also in Denver.

Compared to last year, November market graphics paint a very strong buyer demand with under contract properties up 18.58 percent, while contracts on condos in particular are up 25.94 percent. With only 815 condos active, 726 under contract and 447 sold in November, the market is certainly not in a sleepy fourth quarter.

The core trend here is buyers and investors are taking advantage of price and mortgage rates, and the affordably priced Classic Market continues to grow in demand. All signs point toward the very same dynamics in the new year. — **David Bovard, DMAR Market Trends Committee member and Denver real estate agent**

GLOSSARY

Active Listings: The number of properties available for sale at the end of the reported period. The availability of homes for sale has a big effect on supply-demand dynamics and home prices.

New Listings: The number of properties which became available during the reported period.

Under Contract: The number of listings that were changed status from Active to Under Contract at the end of the reported period. Under Contract listings are counted at the end of the reported period. Each listing can only be counted one time. If a listing goes into Under Contract, out of Under Contract, then back into Under Contract all in one reported period, the listing would only be counted once. This is the most real-time measure possible for home buyer activity, as it measures signed contracts on sales rather than the actual closed sale. As such, it is called a “leading indicator” of buyer demand.

Days on Market (DOM): A measure of how long it takes a given property to sell.

Sold Listings: A measure of home sales that sold and closed during the reported period.

Average Sales Price: A sum of all home sales prices divided by the total number of sales. Not considered the most accurate gauge since data from the high-end can easily skew the results.

Median Sales Price: A measure of home values in a market area where 50% of activity was higher and 50 percent was lower than this price point. This method is preferred because it's more insulated from outlying activity occurring at either tail end of the market.

Months Supply of Inventory (MOI): A measure of how balanced the market is between buyers and sellers. It is expressed as the number of months it would hypothetically take to sell through all the available homes for sale currently, given current levels of home sales. A balanced market ranges from 4 to 6 months of supply. A buyer's market has a higher number, reflecting fewer buyers relative to homes for sale. A seller's market has a lower number, reflecting more buyers relative to homes for sale.

Residential (RES): Represents the overall housing market which includes activity of Single Family Homes as well as Condos.

Single Family (Detached Homes): Activity of Detached Single Family Homes.

Condo (Attached Homes): Activity of Attached Condos & Townhomes.

Classic Market: Properties priced between \$300,000 and \$499,999.

Premier Market: Properties priced between \$500,000 and \$749,999.

Signature Market: Properties priced between \$750,000 and \$999,999.

Luxury Market: Properties priced at \$1,000,000+ (\$1M+).
